4th Workshop on “New Developments in Econometrics and Time Series”

Rome, September 11-12, 2014

Workshop on “Dynamic Factor Models and Structural VAR Analysis”
in honor of Marco Lippi, on the occasion of his 70th birthday

Rome, September 13, 2014

The Einaudi Institute for Economics and Finance (EIEF), the Bank of Italy, the Collaborative Research Center “Statistical Modelling of Nonlinear Dynamic Processes” (SFB 823) and the Deutsche Forschungsgemeinschaft (DFG) announce two international workshops, to be held in Rome September 11-13, 2014, on EIEF’s premises. The first workshop (September 11-12) is on “New Developments in Econometrics and Time Series”; the second (September 13), on “Dynamic Factor Models and Structural VAR Analysis” is in celebration of Marco Lippi’s 70th birthday.

The aim is to bring together internationally renowned experts in these areas and SFB 823 researchers so as to review recent developments and promote scientific exchange.

The first workshop is in part a continuation of the successful series of “Brussels-Waseda Seminars on Time Series and Financial Statistics”.

The workshop on Dynamic Factor Models and Structural VAR Analysis is devoted to an area where Marco Lippi has made substantial contributions. Both theoretical and applied issues will be presented, with special emphasis on macroeconomic and policy applications.

Marco Lippi is a Research Fellow at the Einaudi Institute of Economics and Finance (EIEF). Born in 1943, he graduated in 1965 from the University of Rome “La Sapienza” with a BA in Mathematics. His main research interests focus on time series analysis and macroeconomic business cycles. He has made seminal contributions to the literature on structural VAR and aggregation theory and to the statistic analysis of large macroeconomic data sets. He highlighted the problem of "non-fundamentalness", which is now at the heart of the macroeconometric debate. Moreover, he proposed the Generalized Dynamic Factor Model, which is now a widely used statistical tool for forecasting, business cycle indicators and structural macroeconomic analysis.
