

Nonparametric methods
Spring 2014

Professor Franco Peracchi

franco.peracchi@uniroma2.it

Course outline

1. Nonparametric density estimators

- Empirical densities
- The kernel method
- Statistical properties of the kernel method
- Other methods for density estimation
- Multivariate density estimation
- Stata commands.

2. Linear nonparametric regression estimators

- Regression splines
- The kernel method
- The nearest neighbor method
- Cubic smoothing splines
- Local polynomial regression
- Statistical properties of linear smoothers
- Methods for high dimensional data
- Stata commands.

3. Distribution function and quantile function estimators

- The empirical distribution function
- The empirical quantile function
- Estimating the conditional quantile function
- Estimating the conditional distribution function
- Relationships between the two approaches
- Generalizations
- Stata commands.
